# 1: ABOUT PVC GUTTER

PVC gutters, also called vinyl gutters, are an interesting alternative to traditional guttering systems like copper, seamless and aluminum system. They collect the water that runs off the roof, protecting the home's siding, basement and foundation from water damage. It originated in Scandinavia where temperatures run wild, from forty below in the winter to sixty above in the summer. So PVC gutters definitely have a big upside: like any plastic product, they can withstand extreme weather conditions. Of course, this strength is important when it comes to any exterior installation, especially guttering which has to endure some serious rain and snowmelt.

## HOW IT WORKS

# SPECIFICATION - PVC GUTTER

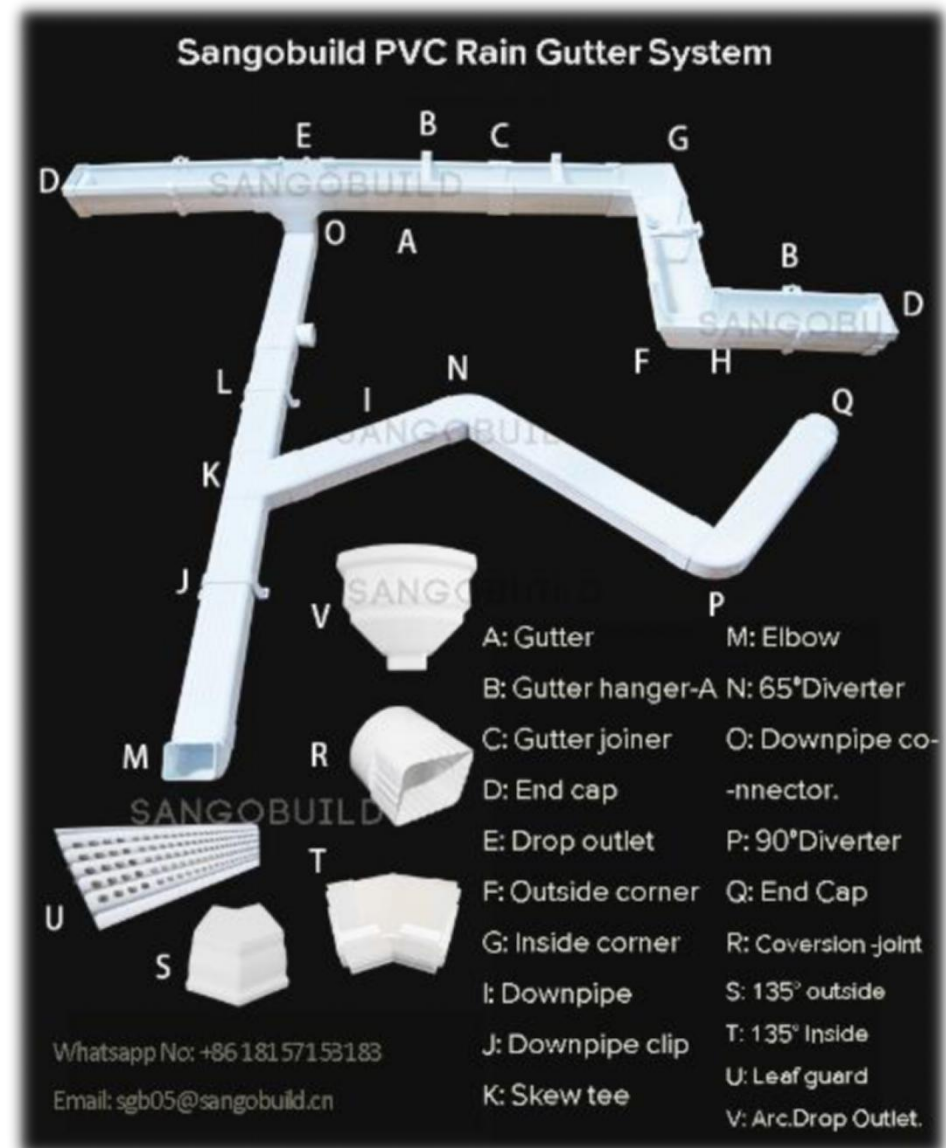

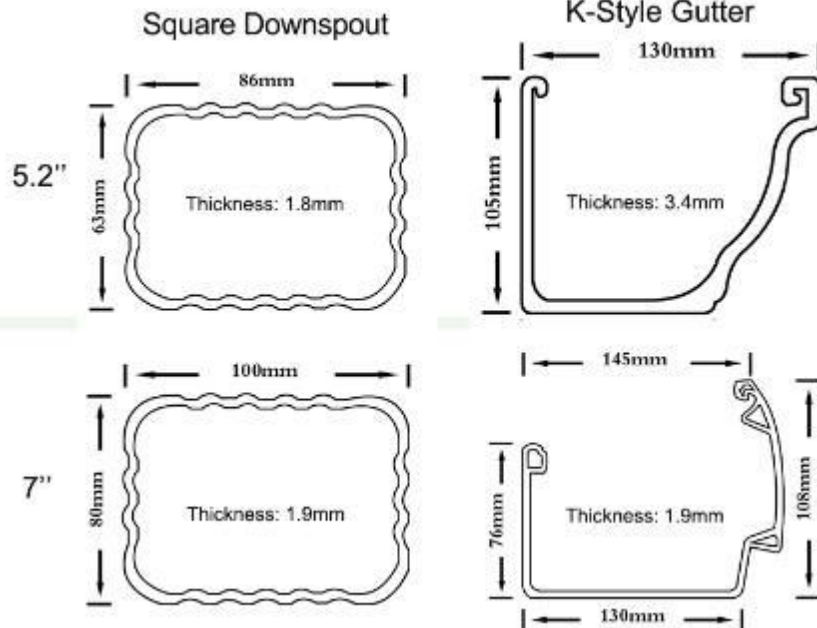

Materials	Specification	Gutter				Downspout	
		Upper (mm)	Down (mm)	Depth (mm)	Thickness (mm)	Length and Width (mm)	Thickness (mm)
PVC	5.2 Inch	130	85	105	3.4	86×63	1.9
	7Inch	145	130	108	1.9	80×100	1.9

# SPECIFICATIONS - PVC GUTTER AND ACCESSORIES

- 1: 70% New PVC contents for durable quality warranty.
- 2: Largest stock in China.
- 3: New ASA gutter which would never fade.

# ADVANTAGES - PVC GUTTER

## Strength

PVC is made from molded plastic which means that the gutters are formed in one continuous unit. There is no paint to scratch or welded seams to corrode over time. In the shape and size of gutters, plastic is stronger than the metal alternatives. The weight of snow, ice or other loads will have less of an effect on PVC gutters. Plus, ladders will not dent the material and any blemishes on the surface will not be visible.

## Flexibility

Another reason to use PVC is its flexibility. Unlike metal gutters, PVC will not lose its shape when it bows slightly. In fact, it is manufactured to be able to bow with weight. Metal gutters are flexible, but when their shape is distorted they stay that way. Bending, denting and twisting effects in metal gutters are easily visible and can become an eyesore. With PVC, you avoid these problems.

## Price

Using PVC for your gutters is less expensive than installing metal. You do not want the final result to look cheap, but if you pick the right product, you will end up with a nice system of gutters at an affordable price. Be sure to hire the right people to install it so that

## Adaptability

Because PVC gutters are injection molded plastic, their shape and color can be adapted to the style of your home. Custom orders will likely increase the price you pay, but if you want the gutters to match precisely with the exterior of your home, this is an option available to you. You may also be able to purchase PVC gutters made from recycled materials. In this way, you are contributing to a sustainable living arrangement while using a superior product.

## Installation

PVC gutters are easy to install. The sections of PVC are very lightweight and snap together quickly. With the right tools, it is a job that you can do yourself without a lot of expense. There is a skill to the installation of gutters including the proper mounting and pitch, but because PVC is less burdensome to work with, the job is easier.

# ADVANTAGES - PVC GUTTER

## Durability

PVC is very light, flexible and strong. It is well suited for use in colder temperatures that receive a lot of snowfall. Also, because it is water-resistant, PVC gutters will never freeze, rust or corrode.

Because the material is more durable, especially in regions prone to extreme weather, PVC is superior to metal gutters. It is less expensive than metal, yet it is customizable to adapt to the exterior finish of your home. If you are replacing your gutters, consider PVC as a viable option.

- Rectangle gutter & pipe fix more **SECURE** than round gutter & pipe
- K-style **EASIER** install
- **DURAL** gutter wall design , double protect

# FAQ

1: Which size of gutter I should choose?

The size and style of gutters you choose is influenced by the location of your house and the environment surrounding it. In the common, 5.2 inch gutter is enough, we suggest you could consider using 7inch if your house has the factor of below,

1): Large house with big roofing area.

2): Houses found in heavy rain areas. Like tropical rainy climate area.

3): Roofing tile made of hard materials (such as tile and slate) and on steeply sloped roofs, in order to prevent the rainwater from overshooting the gutter.

2: Delivery time

Within 7days.

3: Packages.

PE and BOX standard packages. OEM service offered.

4: Warranty.

Never fading and 15 years lifetime.

# ABOUT SAN-GOBUILD

Hangzhou Singer Building Material Co.,Ltd was built in May, 2006.

10years passed, Sangobuild started from a small factory with only 10 employees to three factory with over 400 workers. Now, we have *stone coated roofing tile, asphalt shingle and pvc rain gutter production line* with advanced technology learned from USA and Korea. Four office you could visit us in anytime in Tianjin, Jinan, Hangzhou(Head office) in China. Nairobi, Kenya.

Since 2017, our new production line setteled done in Tianjin city. The new products is for USA market with UL certificate. Sangobuild to be the first factory who has right to export stone coated roofing tile to USA!

Three things we heren promise to you:

- 1:"Quality is our culture", all of our technology is imported from New Zealand, South Korea and USA.
- 2:"With us your money is safe",full refund in case of bad quality or delay delivery time. Furthermore, we have USD220,000 as deposit in Alibaba.
- 3:"Professional service", we are doing it!
